Блокировка доступа к сайту в MikroTik, социальные сети, запрещенный контент

mikrotiklab.ru/blokirovka_sajtov

Одна из наиболее частых задач в корпоративных сетях — ограничение доступа к социальным сетям, личным почтовым сервисам и другому запрещённому контенту. В разные версии RouterOS применялись различные методы:

- блокировка по IP-адресам;
- фильтрация по содержимому в правилах Firewall;
- использование протоколов уровня L7.

Способы блокировки доступа к сайтам в MikroTik

Самый простой способ — использовать запись DNS в **Address List**. Такая запись является динамической, так как список адресов работает с IP-адресами, сопоставляемыми с данными выбранного DNS-сервера. Ниже приводится практический пример.

В качестве примера рассматривается блокировка сайтов категории «онлайн-казино» (букмекерские сервисы, лотереи и прочее). Конфигурация выполняется в разделе **IP** → **Firewall** → **Address Lists**.

Firewall

Filter Rules | NAT | Mangle | Raw | Service Ports | Connections | Address Lists | Layer7 Protocols
