Prerequisites

- Internet connection
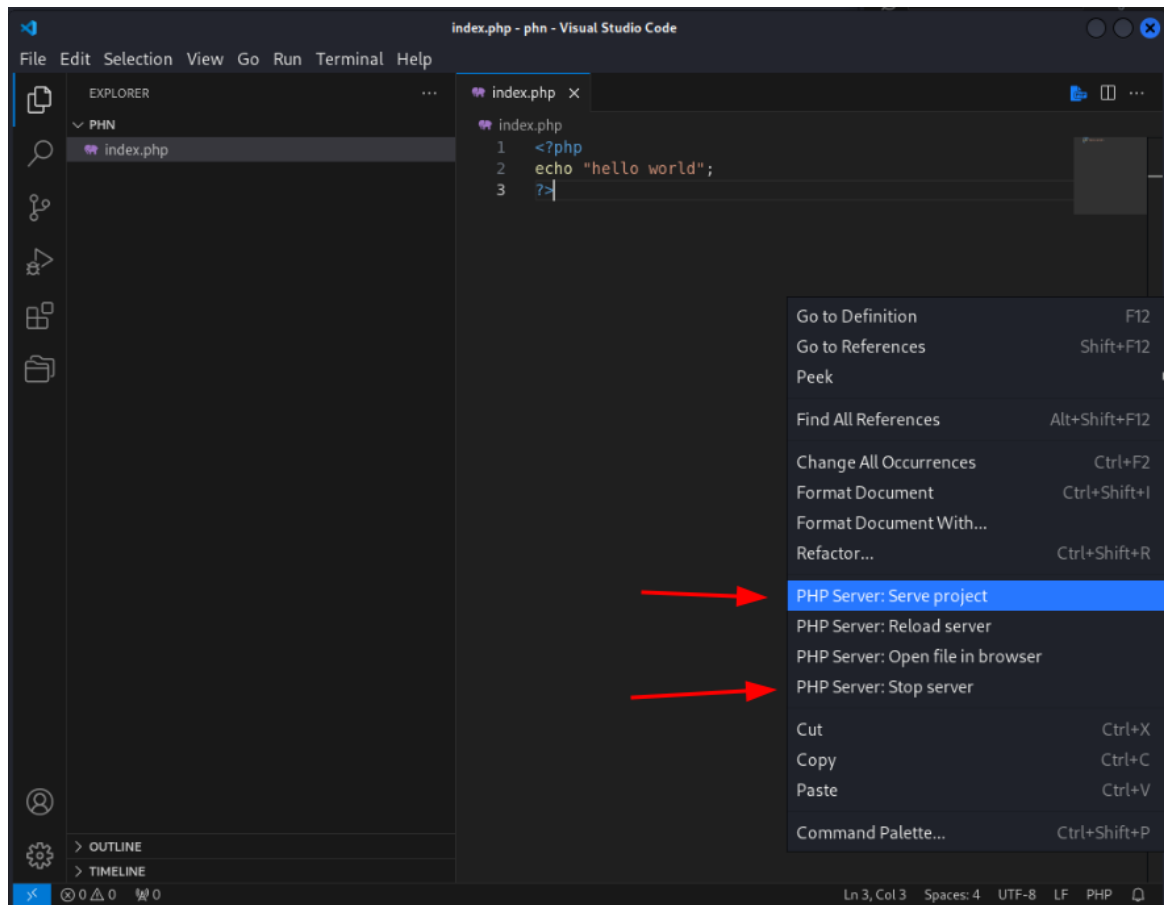

- Linux

Setup

- Download and install VSCode from [here](#)
- Install php with: `apt install php php-cli php-cgi`
- Go to VSCode Settings
- Make this settings:

      add this line like photo: `"php.validate.executablePath":` `"/usr/bin/php"`

- Restart VSCode

- Create an index.php file, right click an you can see `PHP: Serve Project` and `PHP Server: Stop Serve`

- Open browser and go to `localhost`

[Howto](#)
